

FOUR TIPS FOR SAFE ONLINE BANKING

Online banking technology makes managing your money easier than ever before. Ensure safe and secure online banking by following these tips!

1

START WITH A GREAT PASSWORD

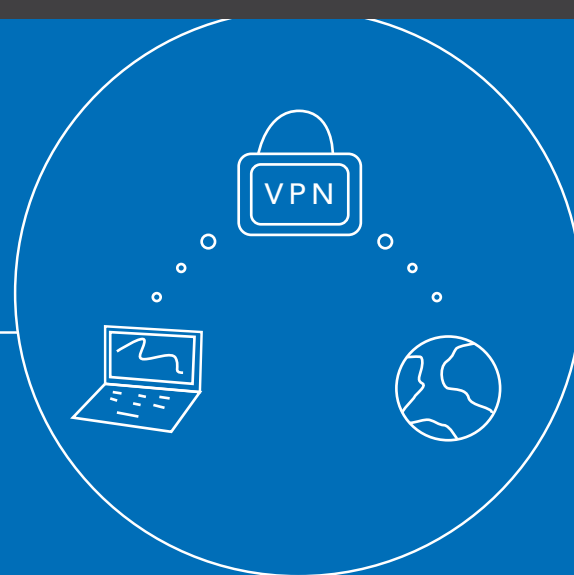

Make sure to use a strong password that uses a mix of letters, numbers and special characters.

2

CONNECT SECURELY

Always avoid online banking when you're connected to a network you don't own. If you are on a public network, connect with a Virtual Private Network (VPN).

Keep your computer updated and use antivirus software to protect your login information.

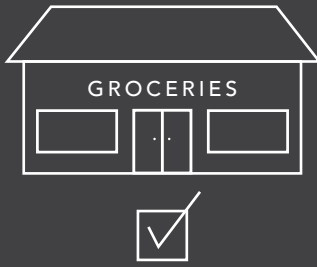

Turn off your wi-fi and use data instead when banking with your phone.

3

PROTECT YOUR CARD WITH CARDVALET

Temporarily disable your card when it's not within a 5-mile radius of your location.

Control spending by disabling your card for specific merchant types.

Quickly turn on and off your card when you're not using it.

4

MONITOR YOUR ACCOUNTS REGULARLY

Keeping a close eye on your balance and transactions is the best way to ensure safety and security. You can easily check your balance from your mobile device.

Opt to receive text notifications when your card is used.
